

SCIGRIP to highlight benefits of MMA adhesives in transportation sector at Composites Engineering 2013

22nd October 2013 - Tyne and Wear, UK – (STAND G145) SCIGRIP, the global leader in smart adhesive solutions, will be exhibiting at the Composites Engineering Show 2013 on 12th and 13th November at the NEC Birmingham, UK. The adhesives specialist will be showcasing two unique 10: 1 MMA structural adhesives designed to meet specific bonding applications in the rail, automotive, recreational vehicle and agricultural construction sectors.

Key products include:

SG300

This advanced technology balances strength and toughness and is excellent for bonding metal to composite components. No preparation or priming of the metal substrate is required and with ratio-adjustable curing speeds, high elongation at break and excellent impact resistance it is already being used with great success by a range of customers. SG300 was also recently accredited with the new EN45545-2 2013 Fire Smoke and Toxicity (FST) standard for interior rail applications.

SG600

With a lower viscosity than many competing brands, SG600 creates a durable and flexible joint. This makes the product suitable for a range of challenging transportation bonding requirements on non-level surfaces. It features excellent fatigue, impact and shock load resistance and is available in a range of working times and packaging options. These include 490ml cartridges, 19 and 189 litre bulk containers with accompanying mix dispense equipment. Thanks to SG600's minimal surface preparation requirements and post finishing processes, customers can significantly reduce production times and labour costs.

SCIGRIP has extensive formulation capabilities at both their UK and USA manufacturing facilities and all products are available in bulk dispensing units. This ensures customers benefit from the commercial advantage of purchasing sufficient quantities without any of the system set-up and operational challenges.
