

**SCIGRIP presents new MMA adhesives range to optimise assembly processes for the transportation sector at JEC 2015**

**25<sup>th</sup> February 2015, Washington, UK** (Pavilion 7.3, Stand F69) – At JEC Europe 2015, SCIGRIP a global supplier of smart adhesive solutions, will be highlighting the crucial role high strength adhesives play within the transportation sector and also introducing a new SG800 range of specialist methyl methacrylate (MMA) bonding systems.

Long term fatigue and short term crash resistance of vehicle components are essential considerations for vehicle manufacturers. This is combined with the desire to ensure assembly processes are as efficient as possible. In response, SCIGRIP will be introducing their SG800 products that are specially formulated and developed for automotive, agricultural vehicles, rail and heavy truck applications.

The SG800 range demonstrates excellent environmental endurance and increased thermal resistance of temperatures above 120°C. These products will appeal to manufacturers of composite structures striving to improve the aesthetics of components whilst optimising part design, production speeds and ultimately reducing costs.

The SG800-05 and SG800-15 products are the latest additions to the portfolio and are available in black and off-white colours offering multiple substrate adhesion to many unprimed metals, sheet moulding composite (SMC) and dicyclopentadiene (DCPD) materials.
