

SCIGRIP POWERCAN® dispenses high viscosity substances without mess or waste

12th July 2017, Washington, UK – SCIGRIP, a global supplier of smarter adhesive solutions, is re-launching their unique and patented POWERCAN® dispensing system in compliance with the fluorinated greenhouse gasses regulation 517/2014.

Available in 100ml or 200ml sizes, the POWERCAN® delivers exact and controlled dosing for high viscosity and difficult to handle materials such as sealants, adhesives, fillers, lubricants and pastes.

No additional equipment is required as the POWERCAN® works through a self-dispensing application method. The product features a 'Twist and Lock System' along with an over cap that inhibits the curing process and prevents nozzles from drying out. A sealed design ensures 0% contamination, 0% wastage and can be dispensed in vertical, horizontal and upturned positions.

The POWERCAN® is already proving very popular in the automotive aftermarket and with the recent addition of a new contract filling service, new markets look set to open up. The POWERCAN® system is of particular interest to the oil and gas as offshore market, where ease of access, due to dispensing guns being unnecessary and single handed, controlled, accurate dispensing are crucial.

The specialised contract filling service allows companies to package their products in the POWERCAN® dispenser in both tilt valve and lever valve styles. SCIGRIP is accepting minimum orders of 2000 cans of 100ml or 200ml sizes filled with any sealant, adhesive, filler or lubricant product.

SCIGRIP branded products currently available in the POWERCAN® format include RTV851 silicone sealant and gasket maker, RTV853 high temperature silicone sealant and gasket maker, RTV854 grey oxime silicone sealant and EXP858 exhaust assembly paste.

For more information on the POWERCAN® product and filling service, please contact Helen Hamilton, SCIGRIP's Product Manager for the Engineering Adhesives Range helen.hamilton@scigrip.com.
