

## SCIGRIP delivers a comprehensive range of adhesive solutions at Composites Engineering 2012

**23<sup>rd</sup> October 2012, Tyne and Wear, UK** – SCIGRIP, the global leader in smart adhesive solutions, will be exhibiting at the Composites Engineering Show 2012 at the NEC Birmingham on the 7<sup>th</sup> and 8<sup>th</sup> November. Currently the UK's largest composites and manufacturing event, it will provide the perfect opportunity for industry specialists to view SCIGRIP's complete range of bonding systems and adhesive chemistries.

SCIGRIP formulates and manufactures products that produce consistently reliable results on a range of substrates including composites, metals and plastics. With a global customer base in the Marine, Transportation, Building Construction and Product Assembly markets, SCIGRIP has the technical expertise to respond to the challenges these sectors face with the supply of high performance products suitable for structural, engineering and signage applications.

### SCIGRIP Product Highlights include:

**SG230HV Series:** An established market leading adhesive in the US marine sector. This high build and low exotherm product produces tough results after cold cure and is suitable for marine, bus, truck, rail, wind and other renewable energy applications.

**SG300 Series:** A primerless metal bonder. This low read through, high fatigue and high shear strength product produces excellent results on composites, metals and plastics bonded to themselves and each other. Replaces or reduces the need for metal fasteners.

**SG100 Series:** This newly improved bright white, permanently toughened adhesive is designed for marine use. It avoids traditional yellowing of other 'white' supplies, requires minimal surface preparation and also demonstrates excellent non-sag properties.

The SCIGRIP team will be available on **Stand 532** to discuss SCIGRIP adhesive solutions in more detail.
